

Arkiv 5.1.12 Release Notes

What's New in Arkiv 5.1.12?

1. Added a new value for the archive frame skipping: 1 per 30 seconds
2. Limited the minimum cycle time of a macro to at least 1 second
3. Added the event of the PTZ control capture to the system log.

System constraints

Starting with Arkiv 5.1.12, the distribution package is no longer compatible with operating systems Debian 9, Ubuntu 18 and Ubuntu 19.

Fixed system security problems

A number of improvements were made to increase the security level and stability of the system.

Web-Client

A number of improvements were made to increase the security level and stability of the system.

IP device support

The release includes the Drivers Pack drivers package of IP devices (see Release Notes Drivers Pack).

Video and audio analytics

The release includes the DetectorPack detector package (see DetectorPack Release Notes). Arkiv distribution package includes only the basic detectors. Additional detector packages are installed separately (see Installing DetectorPack add-ons).

Downloads and licensing

The Arkiv installer includes both the client and server components. The distribution package is compatible only with the 64-bit (x64) systems. The client can be installed on a computer together with the server or installed on a separate dedicated client workstation. There is no limit on the total number of servers and clients in a system.

Arkiv has three license types: Professional, Enterprise, and Unified. Data on all the types of Arkiv licenses is given on this page.

Updating from previous versions

To update from previous versions, run the installer for the new version and select the existing configuration during the installation. Uninstalling the previous version is not required.
